WOULD INCREASE

Washington, Peb. 22 .- Doubling the malaries of public school teachers fwithin the next five years and an addition of 10 per cent, before another ten years have passed, so that the minimum average salary for teachers would be \$1,500, was the program urged b. Commissioner of Education Claxion in a statement today.

"Tenchers are now paid less for our wilk than any other class of others," said the Commissioner, "and the increase in their pay in the last few years has in no wise been in keeping with the increase in pay of other workers, or with the increase in the cost of living. While the cost of living has increased approximately per cent, the salaries of teachers we increased only about 12 per cent

Many of the better teachers are leaving the schools and their places are taken by men and women of less native ability, less education and cul-ture, and less training and experience. Many of the places are not filled at As an insvitable result the charraised to a much higher standard. The

WILL ATTEND UNIVERSITIES

900 soldiers have enrolled for voca-tional and other training in the post schools of the American Expedition-Force. Between 20,000 and 25,000 are planning to begin courses in French and British universities and at the special organized American exeditionary force university open on March 1 at Beaune, cost of Dijon.

Various French universities will reve about 7,500 men and she British versities about 2,000, while there cill be facilities at Denune for from to 15 thousand. This school will courses similar to the work freshman and sophomore years in cill have no part in Beaune univerand a qulifled private may find off an instructor with commis-d officers among his students. which existed in continental Eur-opo.

"James Harris Rogers, practically unknown a few years ago in radio ciropo.

The allied countries labor has cles, except by a few select radio men shown itself more or less in opposition to the government. American the countries of the Navy Department, has practically become over night the center of labor held a deep conviction that, while militarism should be energetically opposed, self preservation department, has practically become over night the center of all attractions in the field of science. Mr. Rogers is a son of the Confederacy and a value of the confederacy and a ically opposed, self preservation demanded that our country should never weaken its power of defense as to be an easy prey to hostile nations. American labor threw all its resources to the government and adopted strong resolutions of support several weeks before war was declared.

"There is no doubt that the positional of the great civil war. He has followed electrical experimenting ever since and has been a strong devotee of radio telegraphy since Marconi performed his first experiments in this new branch of applied science. He is a refined, cultured Southern gentleman who makes you feel at home at once; an invariable at tribute of all the truly great, Mr. Rog. "There is no doubt that the posi-tion taken by the American Federa-ers was one of the first inventors of tion of Labor at its extraordinary the "printing telegraph," and his full conference on March 12, 1917, as-sisted in strengthening the presi-dut's hands and gave him greater Baltimore and Washington, also in confidence to take the step which New York, back in 1880. These were meant our official entry into the seen by the writer, and are wonderful

pieces of mechanism. "The Rogers laboratory, which comprises several large rooms, is lined on all sides with glass cabinets con-Dublin, Feb. 22—At the recent elections several Sinn Fein leaders were returned from more than one constituency. In the normal course, if they were taking their seats, they would have to choose between seats, and there would be fresh elections for the vacancies thus created. But as no Sinn Feiner is going to Parliament this course is not obligatory and they have decided not to adopt it.

I. W. W. prisoners chanted "To hell with America" when they were being taken for deportation. Too had they did not acquire this sentiment before ther war came to this country.

Comprises several large rooms, is inded on all sides with glass cabinets containing electrical apparatus which he has invented from time to time in his studing career. A novel and original fact but has failed to appear and defend the original suit.

In the normal course, of the devices that greatly interested the writer. It employed a jet of water being connected to a high potential source of direct current. High frequency current of any range up to the limit of audibility, or about 30,000 cycles per second, could be readily obtained with this apparatus. The writer merely cites these facts to substantiate the standing of Mr. Rogers in the scientific field. Hundreds of the new wireless 'static and interface of the
